

THIRUMARAN M

Senior Cloud & DevOps Engineer

maranthiru691@gmail.com • +91 85248 68060 • linkedin.com/in/Thirumaran • Puducherry, India

PROFESSIONAL SUMMARY

AWS DevOps & Cloud Infrastructure Engineer with 4+ years of experience architecting and operating cloud-native infrastructure on AWS using Terraform, Docker, and container orchestration on ECS/Fargate. Specializes in designing reliable CI/CD pipelines (GitHub Actions, Jenkins), managing multi-environment AWS workloads (ECS, Lambda, RDS, S3, CloudWatch), and driving L2/L3 incident response across platform and infrastructure layers. Holds AWS Certified Solutions Architect - Professional and AWS Certified Developer - Associate certifications. Comfortable with ambiguity, cross-team collaboration, and maintaining high operational standards in production environments.

TECHNICAL SKILLS

IaC & Orchestration: Terraform, AWS CloudFormation, Docker, AWS ECS (Fargate), Kubernetes

CI/CD: GitHub Actions, Jenkins, AWS CodePipeline, CodeBuild, CodeDeploy

Cloud & Serverless: AWS (ECS, EC2, Lambda, API Gateway, S3, RDS, DynamoDB, Cognito, SNS, SES, SQS, Batch, CloudWatch, CloudTrail, IAM)

Observability & ITSM: CloudWatch, CloudTrail, Jira, Grafana & Prometheus

Scripting: Python, Shell Scripting, Node.js

Databases: PostgreSQL, MySQL, Redis, DynamoDB

CERTIFICATIONS

- AWS Certified Solutions Architect – Professional
- AWS Certified Developer – Associate
- AWS Partner Technical Accredited (Cloud Services, Architecture & Security)

PROFESSIONAL EXPERIENCE

Senior Cloud and DevOps Engineer | Meyicloud Solutions Mar 2026 – Present

- Lead design and implementation of scalable AWS cloud architecture (ECS, Lambda, RDS) using Terraform, establishing infrastructure standards and reusable modules adopted across multiple teams.
- Own end-to-end CI/CD strategy across AWS CodePipeline, GitHub Actions and Jenkins, driving pipeline reliability, security scanning integration, and deployment automation for production workloads.
- Serve as primary escalation point for L3 incident response, leading root-cause analysis and post-incident reviews to strengthen platform reliability and reduce recurring incidents.
- Mentor engineers on DevOps and cloud security practices; partner with architecture and security teams to enforce IAM least-privilege policies, encryption standards, and compliance requirements.

Associate Software Engineer | Meyicloud Solutions Mar 2023 – Mar 2026

- Managed and updated AWS cloud infrastructure (ECS, RDS, S3, EC2, CloudWatch) using Terraform modules, including plan/apply workflows, change validation, rollback preparation, and post-change operational-readiness checks.
- Engineered and maintained CI/CD pipelines using GitHub Actions and Jenkins, automating build, test, and release stages across staging and production environments, reducing average deployment time significantly.
- Containerized services using Docker and orchestrated deployments with AWS ECS (Fargate), achieving high availability and horizontal scalability across production workloads.
- Performed L2/L3 incident management for AWS platform failures - investigated using CloudWatch logs, CloudTrail audit trails, and distributed tracing to identify root causes and drive service restoration.
- Implemented OAuth 2.0 / SSO authentication via AWS Cognito, securing APIs for multi-tenant applications handling thousands of daily active users.
- Collaborated cross-functionally with platform, application, and business teams; created and maintained runbooks, infrastructure documentation, and knowledge articles to reduce recurring incidents.

Trainee Engineer | Meyicloud Solutions Sep 2022 – Mar 2023

- Participated in CI/CD pipeline operations using GitHub Actions, supporting change and release management including build validation, deployment checks, and zero-downtime rollouts.
- Supported AWS Lambda, S3, and API Gateway operations; monitored service health using CloudWatch and responded to production alerts.
- Assisted senior engineers in tracing performance incidents across infrastructure and database layers, applying optimizations to reduce recurrence.

KEY PROJECTS

Multi-Account Hybrid Networking - On-Premises to AWS Connectivity

- Designed and implemented a secure multi-account AWS networking architecture connecting enterprise on-premises infrastructure to the Alliance Cloud via AWS Site-to-Site VPN, ensuring reliable hybrid connectivity.
- Provisioned and managed a centralized AWS Transit Gateway shared across multiple AWS accounts using AWS Resource Access Manager (RAM), enabling a scalable hub-and-spoke network architecture.
- Configured Transit Gateway attachments, route tables, and VPC routing across multiple AWS accounts to provide secure, segmented traffic flow between on-premises environments, AWS workloads, and the Alliance Cloud.
- Automated hybrid networking infrastructure using Terraform, including VPN gateways, Customer Gateways, Transit Gateway, VPC attachments, and routing, while validating and troubleshooting end-to-end connectivity to ensure high availability.

Land Deal – Real Estate Management Platform

- Maintained Terraform-based AWS infrastructure with structured change controls, including plan/apply validation, rollback steps, and operational documentation to ensure safe low-risk production changes.
- Troubleshot ECS task failures and S3 event trigger issues; used CloudWatch Insights and X-Ray traces to identify root causes across the cloud infrastructure layer.
- Managed RDS instance health, parameter group tuning, and automated snapshot schedules to ensure data durability and operational continuity.

Personalized Astrology Platform – SSO & AI Integration

- Designed and managed AWS infrastructure using AWS CloudFormation, enabling consistent, repeatable, and automated deployments across multiple environments for a multi-feature platform with Google SSO, AWS Cognito (Mobile OTP Authentication), and multilingual content delivery.
- Built and maintained CI/CD pipelines using AWS CodePipeline, AWS CodeBuild, and AWS CodeDeploy to automate application build, testing, and deployment processes, reducing manual effort and ensuring reliable, zero/minimal-downtime releases.
- Monitored application health, deployment pipelines, and infrastructure using Amazon CloudWatch, while supporting event-driven services powered by AWS Lambda and Amazon SNS. Created operational runbooks, investigated deployment failures, and responded to production alerts to maintain high service availability.
- Performed troubleshooting and root cause analysis for DynamoDB persistence issues, per-user API quota limitations, and application failures by analyzing CloudWatch Logs, deployment logs, and service metrics, improving system reliability and operational efficiency.

Automated Pipeline – Healthcare Analysis

- Operated and maintained end-to-end AWS Batch automation workflows for healthcare ML model pipelines; managed incident response for pipeline failures and data processing errors.
- Maintained CI/CD pipelines (Lambda, S3, CodePipeline) for data ingestion and transformation; documented procedures to reduce recurring support issues.

EDUCATION

B.Tech - Bachelor of Technology

Christ College of Engineering and Technology, Puducherry, India Aug 2018 – Aug 2022
