PROFESSIONAL SUMMARY

Backend Developer and DevOps Engineer with 4+ years of experience building and scaling cloud-native systems on AWS. Cut deployment cycles by 60% through CI/CD automation with GitHub Actions and Jenkins, and reduced cloud infrastructure costs by 25% using Terraform-managed IaC. Specializes in Python microservices, serverless architectures (Lambda, API Gateway, DynamoDB), and container orchestration (Docker, Kubernetes) — with a focus on high availability, performance, and operational efficiency. Holds AWS Certified Solutions Architect – Professional and AWS Certified Developer – Associate certifications. Passionate about designing scalable backend systems that enable product teams to ship faster with confidence.

TECHNICAL SKILLS

Languages: Python, Node.js, Shell Scripting

Cloud & AWS Services: AWS Lambda, API Gateway, DynamoDB, S3, ECS, EC2, CodePipeline, CodeDeploy, CodeBuild, RDS, Batch, Cognito, CloudWatch

DevOps & CI/CD: Docker, Kubernetes, Terraform, Jenkins, GitHub Actions

APIs & Architecture: RESTful APIs, OAuth 2.0, SSO (AWS Cognito, Google SSO), Event-Driven Architecture, Microservices

Databases: PostgreSQL, MySQL, Redis, DynamoDB

Frameworks & Tools: Flask, Express.js, Socket.io, Git, Agile/Scrum

CERTIFICATIONS

- AWS Certified Solutions Architect – Professional | Amazon Web Services.
- AWS Certified Developer – Associate | Amazon Web Services.
- AWS Partner: Technical Accredited – Cloud Services, Architecture & Security | Amazon Web Services.

WORK EXPERIENCE

Associate Software Engineer | [Meyicloud Solutions](#)

Mar 2023 – Present

- Architected and maintained Python-based backend microservices integrated with AWS Lambda, API Gateway, and DynamoDB, reducing API response latency through serverless cold-start optimizations.
- Engineered CI/CD pipelines using GitHub Actions, AWS CodePipeline and Jenkins, cutting average deployment time by 60% by automating build, test, and release stages across staging and production environments.
- Provisioned and managed AWS cloud infrastructure (ECS, RDS, S3, CloudWatch) using Terraform, reducing monthly cloud costs by 25% through right-sizing and automated resource scheduling.
- Implemented OAuth 2.0 / SSO authentication via AWS Cognito, securing APIs for multi-tenant applications serving 10,000+ daily active users with zero reported auth incidents.
- Containerized backend services using Docker and orchestrated deployments with Kubernetes, achieving Full uptime and enabling horizontal scalability across 3 environments.
- Delivered 20+ features on schedule by collaborating cross-functionally with product, QA, and front-end teams in Agile/Scrum sprints, maintaining a consistent two-week release cadence.

Trainee Engineer | [Meyicloud Solutions](#)

Sep 2022 – Mar 2023

- Developed 10+ Python backend modules integrated with AWS Lambda, S3, and API Gateway, contributing directly to a production system serving live customer traffic with zero critical defects post-release.
- Built and maintained CI/CD pipelines for 3 projects using AWS CodePipeline, enabling automated builds and zero-downtime deployments that reduced manual release effort by 40%.
- Resolved 15+ critical performance bottlenecks in collaboration with senior engineers, improving application response times through query optimization and Redis caching strategies.

PROJECTS

Land Deal – Real Estate Management Platform

- Designed full backend and DevOps architecture for an internal real estate platform managing property evaluation, deal creation, and partner collaboration for 500+ active listings.
- Built RESTful APIs with Python/Flask; integrated AWS ECS, S3, Lambda, and RDS to deliver a scalable, highly available system maintaining a 99.9% uptime SLA.
- Managed end-to-end DevOps including Docker containerization, CI/CD pipeline setup, and Terraform-based AWS infrastructure provisioning, reducing deployment lead time by 50%.

Personalized Astrology Platform – SSO & AI Integration

- Architected and delivered backend infrastructure for a multi-feature platform serving 5,000+ registered users, supporting Google SSO, mobile OTP via AWS Cognito, and multilingual content delivery.
- Built a Karma Points (KPoints) credit system processing 1,000+ in-app transactions per day, with per-user API quota tracking and DynamoDB-backed persistence ensuring data consistency at scale.
- Implemented event-driven push notifications via AWS SNS and Lambda, delivering 50,000+ monthly notifications triggered by astrological events with a 98% delivery success rate.

Automated Pipeline for Healthcare Analysis

- Built end-to-end automation workflows for a research application classifying bacteria in human samples using ML models and AWS Batch, processing 500+ samples per run.
- Implemented CI/CD pipelines with AWS Lambda and S3 to automate data ingestion, transformation, and cloud storage, reducing manual processing time by 70% in a fully serverless environment.

Sales Management Application

- Developed a serverless backend using Python and AWS Lambda handling 500+ order transactions per day, supporting order processing, inventory management, and real-time transaction tracking.
- Integrated DynamoDB Streams with Lambda triggers for real-time inventory updates, reducing order processing latency from 3 seconds to under 500 ms with minimal operational overhead.

EDUCATION

Bachelor of Technology (B.Tech) – Computer Science & Engineering *Aug 2018 – Aug 2022*

Christ College of Engineering and Technology, Puducherry, India
